
EDUCATION

Arizona State University
Master of Science in Computer Software Engineering

Expected May 2027

Ganpat University
Bachelor of Technology in Information Technology (Gold Medalist)

Aug 2021 – Jun 2025

TECHNICAL SKILLS

- **Languages & Core CS:** Python, JavaScript, C/C++, HTML/CSS, Data Structures & Algorithms, OOP
- **Frameworks & Libraries:** React.js, Flask, Django, LangChain, TensorFlow Lite, RESTful APIs, Cypress, Bazel, Unity, Meta Quest SDK
- **AI & Machine Learning:** Gemini APIs, Generative AI, Embedding Models, HuggingFace, DB-GPT, Tesseract OCR, JetSki Agents, Computer Vision
- **Cloud & DevOps:** Google Cloud Platform (GCP), AWS, Azure, Docker, GitHub Actions (CI/CD), Firebase, Git/GitHub

PROFESSIONAL EXPERIENCE

ASU MeshLabs | AI Integration Engineer

Aug 2026 – Present

- Developed a VR-based conduit bending learning experience, achieving 94% gesture classification accuracy by engineering a hybrid physical action recognition system combining Temporal Convolutional Networks (TCN) and rule-based heuristics.
- Engineered dynamic behavioral AI for virtual instructors, driving a 35% reduction in trainee error rates by integrating real-time player tracking data with contextual dialogue and scoring systems in Unity.
- Built custom data pipeline automation tools, yielding a 50% decrease in model training lifecycle times by scripting Python workflows to parse and format raw GoPro reference videos into structured datasets.

Intrinsic (An AI Robotics Company at Google) | Software Engineer Intern

May 2026 – Aug 2026

- Accelerated bug investigation workflows, delivering a 92% reduction in triage time (under 5 minutes) by engineering an Agentic AI CLI using Gemini LLMs and Chain-of-Thought prompting to autonomously analyze GitHub workflows and cluster logs.
- Eliminated manual triage for on-call engineers, saving 2 hours daily by building an automated Postsubmit Failure Analysis system on GitHub Actions that parses 100+ workflow runs and publishes actionable diagnostic reports.
- Optimized the release cycle, reclaiming 4 hours of engineer time per cycle by designing an autonomous Buganizer and PR automation pipeline that calculates flakiness from historical runs and auto-generates remediation PRs.

Prama | Software Engineer Intern

Jan 2025 – Jun 2025

- Improved conversational flow reliability and response accuracy, recording a 35% increase by implementing functional, exploratory, and regression testing suites across multiple AI chatbot implementations.
- Scaled backend infrastructure, successfully handling 10,000+ daily requests with 99.9% uptime by engineering robust Python, Flask, and FastAPI server applications with optimized RESTful endpoints.
- Accelerated web interaction speed, evidenced by a 25% reduction in user bounce rates by building responsive, mobile-first web components in React.js and streamlining cross-stack data integration.

TECHNICAL PROJECTS

HealthSync: Full-Stack Healthcare Platform | Python, Gemini AI, Tesseract OCR, Flask

Jul 2024 – Dec 2024

- Increased medication adherence, generating a 60% boost among test users by creating a full-stack Python application featuring personalized tracking and multi-treatment analytics.
- Automated medical document workflows, reaching 90%+ extraction accuracy and reducing processing time by 40% by integrating Tesseract OCR and Google Gemini AI for intelligent prescription processing.

Smart Attendance & Analytics System | Python, Neural Networks, REST APIs, DB-GPT

Oct 2023 – Jan 2024

- Won 1st Place at the Gateway Group Hackathon, defeating 50+ competing teams and securing the \$840 prize by leading a team to design and deploy an AI-driven face recognition platform using deep neural networks.
- Boosted attendance tracking efficiency, realizing a 40% speed increase and 25% accuracy gain by implementing real-time RESTful APIs and integrating DB-GPT for natural language query execution.

Rabbit Robot: Autonomous Sensing System | C++, TensorFlow Lite, ESP32, PID Control

Jan 2023 – July 2024

- Engineered a high-precision autonomous robotic system, securing All India Rank 9 (Top 6% among 150+ teams) at DD Robocon by designing tuned PID control algorithms that reached an 85% target hit rate.
- Enhanced real-time anomaly detection, demonstrating 95% accuracy across 1,000+ test scenarios by integrating LiDAR sensors and deploying TensorFlow Lite models on ESP32 microcontrollers.
